# Bachelor of Science

## Doctor of Medicine Pathway

### Level 1

| Breadth | Breadth (Level 1/2)* | Science subject (Level 1/2)* | Chemistry 1 | Chemistry 2 | Biology of Cells and Organisms | Genetics and the Evolution of Life |

### Level 2

| Breadth (Level 1/2/3)* | Biochemistry and Molecular Biology | Science subject (Level 1/2/3)* | Human Physiology | Science subject | Principles of Human Structure | Science subject |

### Level 3

| Breadth or Science subject* | Science subject | Science subject | Major Subject | Major Subject | Major Subject | Major Subject |

---

**Elective Subjects**

**Core Subjects**

---

** Majors: ** The subjects you choose in first year will affect your major options. Check the [Course Planning & Advice Guide](#) for the Level 1 subject requirements for each major.

You can keep more than one major open until the end of second year; only one major will be recognised on your completed academic transcript.

**Breadth** comprises a minimum of 50 credit points, a maximum of 75 credit points, and no more than 37.5 points at Level 1 of study outside your Faculty's study areas.

For satisfy the prerequisite subjects for into the Doctor of Medicine, you must complete the three Level 2 prerequisite subjects: ANAT20006 Principles of Human Structure, BMIC20002 Biochemistry and Molecular Biology and PHYS20008 Human Physiology, which are available in both semesters. Please be aware that ANAT20006 Principles of Human Structure’s availability is subject to an enrolment quota.

Managing your study load
A typical full-time enrolment comprises 50 points per semester, which enables the completion of your degree in three years; this is considered a full-time study load.
If you are a domestic student, you may also reduce your study load to 37.5 points per semester and still be considered a full-time student at the University, although this will typically delay the completion of your degree.

The Melbourne Curriculum offers a number of subjects taught intensively, rather than in standard Semester 1 or Semester 2 availabilities. Enrolling in intensively-taught electives may assist in better balancing your study load during Semester 1 and Semester 2.

Enrolment, Census Dates
At the University, your enrolment is your responsibility.
For subjects taught in Semester 1 and 2, it is important that your enrolment is finalised within the first two weeks of semester; the census dates, after which fees are incurred and results will be entered, are March 31 and August 31 respectively.
Census dates for intensively-taught subjects vary; please refer to their individual handbook.unimelb.edu.au entry for more detailed information.

Concurrent Diplomas
In addition to Breadth studies, you may wish to augment your degree with a Concurrent Diploma in one of the following specialist areas:

- Languages
- Informatics
- Mathematical Sciences
- Music

Concurrent Diplomas comprise 100 points of study, and typically extend the duration of your degree. There are a range of options to cross-credit subjects between your degree and diploma; please consult students.unimelb.edu.au/achieve/concurrent-diplomas for more information.

Planning for Study Abroad/Exchange
Completing a component of your degree at one of the University’s approximately 180 partner institutions overseas is a terrific way to enrich your studies. Typically, the window to study on exchange is in the fourth or fifth full-time semester of your degree.

Please note that an application process and eligibility criteria apply; consult http://mobility.unimelb.edu.au for more information.
